Regulatory Information

The Waste of Electrical and Electronic Equipment (WEEE) and its recycling

The Directive 2012/19/EU of 4 July 2012 regulates the Waste Electrical and Electronic Equipment (WEEE) https://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2012:197:0038:0071:en: and supplements the general waste management legislation of the European Union.

XSYS generally supports the objectives of the Directive 2012/19/EU on WEEE and supports the activities to preserve, protect and improve the quality of the environment and to utilize natural resources prudently and rationally.

As the market continues to expand and innovation cycles become shorter, the replacement of equipment accelerates, making EEE a fast-growing source of waste.

We, at XSYS, are honoured that you trusted us with the purchase of an electrical and electronic equipment from XSYS and we look forward to providing you further with excellent service, for a long lasting equipment into the future.

However, even the most robust and reliable equipment comes to its end of life at some point in time. And many electrical and electronic appliances can be recycled. If not recycled, electrical parts and equipment will end up in landfill.

The marking with a crossed-out wheeled bin symbol reminds that old electrical equipment can be recycled and shall not be disposed in the household waste, as shown below.

Recycling of Waste of Electrical and Electronic Equipment (WEEE) is a specialist part of the waste and recycling industry, helping to save natural resources and protect the environment.
